                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    polypoptide is a transcription factor that activates transcription of numerous genes involved in DNA replication, thus playing a role in the G1 regulated transcription factor 1) has been shown to form specific multiprotein complexes with the retinoblastoma susceptibility protein, pl07, cyclins and cdk2. The DP polymucleotide was used to produce a transgenic plant. The DP nucleic acids and proteins are useful for increasing transformation efficiency in plants by increasing the number of dividing cells in the plant (dividing cells may be more receptive to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                123

```
The invention relates to a novel cell cycle protein (CCP) and the polymorlectides encoding them. CCP is useful for identifying a compound which modulates the activity of the polypeptide and which binds to thee polypeptide and an anti-CCP antibody is useful for adulating the cell cycle or growth of a plant such as Arabidopsis thaliana, rice, wheat, maize, tomato, alfalfa, oilseed rape, soybean, sunflower and canola. CC cycle or growth of a plant such as Arabidopsis thaliana, rice, wheat, candleid and olypeptide molecules are useful as modulating agents in regulating cell cycle progression in plants. CCP is useful to treat disorders characterised by insufficient or excessive production of CCP protein forms which have decreased or percent activity. Compounds that bind to or modulate the activity of CCP protein forms which have decreased or polymeptide are useful as herbicides or plant growth regulators. The polymucleotide is useful for modifying cell fate, plant development, of polymeptide are useful as herbicides or plant growth regulators. The polymucleotide is useful for modifying cell fate, plant development, the cell cycle of a plant, initiation, promotion, promotion, stimulation or enhancement of cell division, blant polymucleotide stimulation or enhancement of cell division, but replication, seed set. comessence, tolerance or resistance to stress. CCP, the polymucleotide and the anti-CCP antibody are useful in agriculture to modulate the conditions, heat, drought, salt stress, or biotic stress such as cond, mutrient deprivation, heat, drought, salt stress, or biotic stress such as cond, mutrient deprivation, heat, drought, salt stress, or biotic stress such as cond attendance conditions, heat, drought, salt stress, or biotic stress such as immunogen to generate antibodies. CCP protein is useful for expressing CCP protein, to detect CCP munk, or engeneral essentes and to generate antibodies. CCP protein is sequence represented and to development.

CC protein levels or a genetic lesson in a CCP protein of end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     invention

The present invention describes a method for modulating endoreduplication in a plant, or a part of the plant. The method comprises modifying the expression or activity of an E2F and DP gene or polypepitide. Also described: (1) a transgenic plant cell overexpressing an E2F or E2Fa gene, or an E2F and DP gene or an E2Fa and DPs gene, where the E2F or E2Fa gene or the DP or DPs gene is under the control of a tissue or celltype specific promoter; (2) a transgenic plant, or a part of the plant, comprising the cells described above; (3) a progeny of the plant described above; and (4) a plant material obtained from the plant described above; The method is useful in modulating plant cell cycle proteins by modifying the expression or activity of an E2F and DP gene or polypeptide. The present sequence represents Arabidopsis thaliana DP, which is used in the exemplification of the present invention
                                                                                                                                                   Modulating endoreduplication in a plant, or a part of the plant, comprises modifying the expression or activity of an B2Fa and DPa gene or

The present invention relates to increasing the cell number of specific cell types, specific tissues or specific organs in a plant comprises modulating the expression and/or the activity in the specific cell types, specific tissues or specific organs of the plant E2F transcription factor. The E2F transcription factor or its homologue, derivative or fragment, is useful for prolonging the period of cell division in certain cells and tissues, for increasing the size of cotyledons, for enhancing cell proliferation after seed germination, for enhancing stress resistance of seedlings, for obtaining seedlings with enhanced vigor, for obtaining plants that have increased growth or number of organs, for obtaining plants having more cells in a particular tissue, for obtaining plants having an increased size of organs or having increased yield, for stimulating differentiated cells to re-enter the cell cycle, for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Modifying cell number, architecture and yield of plants comprises modulating the expression and/or the activity of members of the plant E2F transcription factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Inze D, Mironov V, Broekaert W;

IsSUE SPECIFICITY: High levels in heart and skeletal muscle. Also found in placenta, kidney, brain, lung and liver. The presence as well as the abundance of the different transcripts appear to vary significantly in different tissues and cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Missing (in isoform Beta, isoform Gamma and isoform Delta).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GENERAL INFORMATION:
APPLICANT: LaThangue, Nicholas B.
APPLICANT: delaluna, Susana
TITLE OF INVENTION: TRANSCRIPTION FACTOR DP-3 AND ISOFORMS
TITLE OF INVENTION: THEREOF
NUMBER OF SEQUENCES: 21
CORRESPONDENCE ADDRESS:
ADDRESSEE: NIXON & VANDERHYE P.C.
STREET: 1100 No. 5859199th Glebe Rd. 8th floor
CITY: Arlington
STATE: VA
COUNTRY: USA
ZIP: 22201-4741
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/723,415B
FILING DATE: 30-SEP-1996
CLASSIFICATION DATA:
APPLICATION NUMBER: GB 9610195.1
FILING DATE: 15-MAY-1996

US-08-428-131-2

Sequence 2, Application US/08428131

Patent No. 5863757

GENERAL INFORMATION:

RAPLICANT: La Thangue, Nicholas Barrie

TITLE OF INVENTION: Transcription Factor DP-1

WUMBER OF SEQUENCES: 14

CORRESPONDENCE ADDRESS:

ADDRESSEE: Nixon & Vanderhye

STREET: 1100 No. 5863757th Glebe Road, 8th Floor

CITY: Arlington
STATE: Virginia

COUNTRY: U.S.A.

ZIP: 22201-4714

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC. Compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.25 (EPO)

CURRENT APPLICATION DATA:

MAPLICATION NUMBER: US/08/428,131

FILING DATE: 23-JUN-1995

CURSSIFICATION NUMBER: 25,327

REFERENCE/DOCKET NUMBER: 125,327

REFERENCE/DOCKET NUMBER: 25,327

REFERENCE/DOCKET NUMBER: 25,327

REFERENCE/DOCKET NUMBER: 17-181

TELECOMMUNICATION INFORMATION:

TELECOMMUNICATION INFORMATION:

TELEFROME (703) 816-4100

INFORMATION POR SEQ ID NO: 2:

SEQUENCE CHARACTERISTICS:

LENGTH: 410 amino acids

TYPE: amino acids

TYPE: amino acids

TYPE: And ALLINGARES ACID NO: 2.
